MAXLINK INDUSTRIAL SLATS™

The MaxLink™ Industrial system is a unique and efficient system which combines the chain link wire and privacy slat as a complete package – no need for using labor to stretch the wire and then come back to hand-insert each individual slat.

Using a state-of-the-art Bergandi high-speed weaving/insertion machine, Slat Warehouse can manufacture the specified wire in a 3.5" x 5" mesh, and mechanically insert the Max-Industrial slat, securing each slat to the wire with a stainless-steel staple, which holds the slat level and secure for years to come.

The Max-Industrial slat is a double-wall, flat tubular extrusion with three internal support legs for strength and structure, and formulated using High Density Polyethylene (HDPE), combined with additives to ensure color and functionality for many years of exposure to ultra-violet exposure from the sun.

- **Heights** – Available in standard heights of 3', 4', 5', 6', 7', 8', 10', 12'
- **Packaging** – The MaxLink™ Industrial system is produced in rolls of 25' at a minimum, and then in 5' increments thereafter. Bulk quantity Max-Industrial slats 'only' are also available to those capable of weaving chain link wire and pre-inserting slats. Each package contains 2,014 pieces, individually stacked in a durable wood crate.

- **Warranty** – For details on the limited 30-year warranty for the Max-Industrial slat (slat only), please contact Slat Warehouse directly or refer to www.slatwarehouse.com. The various wires used for weaving are covered under a separate warranty.

• Wire Options

Galvanized Wire – The Max-Industrial slat can be woven into three options of GBW (Galvanized Before Weaving) wire. All of our galvanized wire is manufactured with a 1.2 oz. (per square foot) of a protective zinc coating.
